

SPiRiT OF **AIR** [®]

powerfoil 1.8

CAUTION – POWER KITE

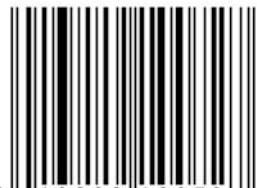

Easy to fly

**Quality line and
wrist straps included**

**Skill level –
beginner to expert**

**Large
180cm wingspan**

0 13229 10072 7

Caution – this is a powerful kite!!!

If flown in high winds, stronger flying line other than the ones supplied will be required. Not recommended for children under 12 without adult supervision.

Wind range 5mph – 20mph

Remove the Powerfoil from its bag and lay it on the ground in front of you with the bridles uppermost and the opening in the front of the sail pointing away from you.

Detach each half of the bridles from the security loops at the trailing edge. Unwind all of the lines from the winder and attach one pair of ends to the flying straps (see photograph) and the other ends to each of the bridles with a larks head hitch (see photograph). Hold the straps without crossing them with the line connected to the left side of the kite in the left hand and the right side in the right hand the line ends are colour coded to help identify them.

To launch your Powerfoil have a friend hold the kite in front of them with the leading edge opening pointing towards the sky as you gently pull back evenly on both flying lines.

Do's and Don'ts

Don't fly your Powerfoil straight into the ground it may explode !!!!

Don't fly your kite if there is a risk of thunderstorms.

Don't fly near overhead power cables.

Don't fly above people or animals.

Don't fly above 60m (200ft) altitude or within 5km (3 miles) of an airport.

Do have serious fun
